EDUCATION

Selçuk University Bachelor of Computer Engineering

Sep 2023 - Jun 2027

- Studied fundamental topics: algorithms, data structures, object-oriented programming, databases

Mehmet Tuza Pakpen Technical High School

Sep 2019 - Jun 2023

- Studied core topics: microcontroller programming, circuit design, PLC systems, and industrial sensors

PROJECTS

Data-Driven Aeroacoustic Prediction for NACA 0012 Airfoil

- Developed a data-driven machine learning approach for aerodynamic self-noise prediction using experimental NACA 0012 airfoil data.
- Compared multiple regression models using five aerodynamic variables and achieved $R^2 = 0.962$ and RMSE = 1.38 dB with an optimized XGBoost model. [Web](#)

LSTM-Based Remaining Useful Life Prediction for Turbofan Engines

- Developed an LSTM-based prognostics model for turbofan engine Remaining Useful Life (RUL) prediction using the NASA C-MAPSS FD001 dataset.
- Modeled multivariate time-series data from 14 sensor channels over 50-cycle sequences, achieving an RMSE of 13.87 cycles on the evaluated test engines. [Web](#)

Foundry Local RAG for Technical Documents - Microsoft AI Internship

- Developed a fully local industrial RAG assistant supporting technical PDF, DOCX, and XLSX documents with hybrid retrieval and citation-based responses.
- Integrated Query Rewriting, Reciprocal Rank Fusion, Cross-Encoder re-ranking, Self-RAG grading, and entity-aware retrieval to improve technical Q&A reliability. [Web](#)

Home Robotics with MuJoCo & ROS 2 - METU ROMER Research

- Developed a dual-arm home robotics framework integrating ROS 2, MuJoCo, and Vision-Language-Action workflows for robotic manipulation.
- Built a lightweight simulation environment with two Franka Panda robotic arms, structured control architecture, manipulation pipelines, and reproducible task execution. [Web](#)

TÜBİTAK 2209-A - Deep Learning Based Oilseed Classification

- Developed an image processing and deep learning pipeline for the detection and six-class classification of oilseeds.
- Evaluated multiple deep learning approaches on a dataset of more than 10,000 images to improve classification performance. [Web](#)

ACHIEVEMENTS & COMPETITIONS

Unilever Factory Experience @HPC - 1st Place

- Ranked 1st in the Factory Experience program, applying data-driven problem solving to real-world manufacturing challenges.

Unilever Chain Reaction @ U-House - Finalist

- Participated in a competitive supply chain simulation, applying data-driven optimization and decision-making strategies.

TEI Aviation Engines School - Certificate of Achievement

- Completed a 16-week aviation engines training program and earned a Certificate of Achievement after successfully passing the final examinations.

IBM Bob 2.0 Developer Workflow Challenge

- Leveraged Agent Mode, parallel tasks, subagents, and document understanding to reduce manual effort and rework in developer workflows.

TECHNICAL SKILLS

AI & Machine Learning: LLMs, RAG, Deep Learning, Computer Vision, LSTM, Attention, XGBoost

Robotics & Simulation: ROS 2, MuJoCo, Gazebo, Isaac Sim, Franka Panda, KUKA, KRL, PLC

Retrieval & Backend: BM25, Vector Search, Cross-Encoder, FastAPI, SQL

Programming Languages: Python, C++, C#, Java

DevOps & Tools: Git, Docker, Linux, Pandas

WORK EXPERIENCE

METU ROMER - Visiting Research Intern

Aug 2026 - Sep 2026

- Analyzed ROS and Isaac Sim workflows for home robotics, exploring Vision-Language-Action (VLA) models for manipulation tasks.
- Developed a lightweight MuJoCo simulation environment on Apple Silicon, integrating ROS 2 control architectures for dual Franka Panda arms.

Microsoft Türkiye - Summer AI Intern

June 2026 - Aug 2026

- Designed and developed a local AI solution for industrial automation using Microsoft Foundry Local and RAG architectures.
- Built a modular retrieval and generation pipeline combining hybrid search, re-ranking, and relevance evaluation.

FAB Tech. Inc - Product Management Intern

Sep 2025 - Nov 2025

- Completed an AI & Startup Strategy Fellowship, applying Founder and Project Mindset to develop ideas from 0 to 1.
- Built workflow automations with UiPath and used Google AI tools to create generative AI-driven business solutions.

OSR Robotics - Robotics Intern

June 2025 - July 2025

- Designed and implemented ML-driven fault detection algorithms for industrial robotic systems
- Programmed KUKA robots and analyzed motion through kinematics and dynamic modeling

Komalp - Industrial Automation Intern

June 2023 - July 2023

- Participated in the installation, maintenance, and troubleshooting processes of factory electrical systems.
- Conducted assembly, fault detection, and monitoring operations for power factor correction (PFC) panels.

Devpak Machine - Industrial Automation Intern

June 2022 - Oct 2022

- Assisted in PLC programming, control panel design, and machine wiring for industrial automation systems
- Observed and analyzed existing automation systems to identify improvements in operational efficiency

CERTIFICATES

TEI Aviation Engines School - Certificate of Achievement

Unilever Supply Chain + Chain Reaction

Aspire Institute - Aspire Leaders Program

Deloitte Australia - Data Analytics

Fundamentals of Deep Learning

Academy Of Responsible Development Erasmus+

Intermediate Machine Learning
